
Preface

Greenberg's Handbook of Neurosurgery is one of the most popular books among neurosurgery residents. It is concise but comprehensive and covers almost all the aspects of neurosurgery including basic concepts as well as advanced operative procedures. Due to its concentrated nature, it is hard to retain all this information well enough to reproduce it in exams efficiently.

This collection of questions is based on chapters as per Greenberg's chapter distribution and will act as a rapid review. We have tried to base the questions according to the exam-oriented high-yield points. It can be added to the

list of exam preparation books for any standard neurosurgery examination.

Shehzad Safdar Tarar, MBBS

*Zubair Ahmed Khan, MBBS,
FCPS Neurosurgery*

*Mubashir Malik, BSc, MBBS, MRCSEd,
MS Neurosurgery*
