

Table of Contents

Section A: Manual

1 Introduction	3	Sympathectomy	21
The Role of Medical Thoracoscopy/Pleuroscopy in Respiratory Medicine	3	Thoracic Lymphadenectomy	21
History and Development of Thoracoscopy/ Pleuroscopy	4	Cervical Mediastinoscopy versus VATS	21
Artificial Pneumothorax	4	Anterior Mediastinotomy versus VATS	21
Pleural Drainage	5	Summary	21
Introduction of Thoracoscopy as a Diagnostic Method	5		
Use of Thoracoscopy for Diagnostic Purposes	7		
Thoracoscopy as a Therapeutic Procedure in Tuberculosis (Jacobsen Operation)	7		
Thoracoscopy as a Therapeutic Tool in Nontuberculous Disease	10		
Further Development of Thoracoscopy as an Important Diagnostic Tool	11		
Development of Thoracoscopy for Minimally Invasive Thoracic Surgery ("Surgical Thoracoscopy")	14		
2 Differences between Medical Thoracoscopy/ Pleuroscopy and Surgical Thoracoscopy/ Video-assisted Thoracic Surgery	16		
Video-assisted Thoracic Surgery (VATS)	16		
General Approach to VATS Procedures	17		
Anesthesia	18		
Indications and Contraindications	18		
Lung Procedures Performed with VATS	18		
Lung Biopsy	18		
Wedge Resection	18		
Pulmonary Metastases	18		
Lobectomy	19		
Lung Volume Reduction Surgery	19		
Pleural Procedures Performed with VATS	19		
Treatment of Pneumothorax	19		
Decortication	20		
Esophageal Procedures Performed with VATS	20		
Excision of Cysts and Benign Tumors	20		
Anti-reflux Procedures	20		
Esophagectomy	20		
Mediastinal Procedures	20		
Thymectomy	20		
Thoracic Duct Ligation	20		
Pericardial Window	20		
3 Indications for and Results of Medical Thoracoscopy/Pleuroscopy	22		
Management of Pleural Effusions	23		
Diagnostic Approach	23		
Malignant Pleural Effusions	25		
Tuberculous Pleural Effusions	29		
Parapneumonic Effusions and Pleural Empyema	31		
Effusions of Other Origin	32		
"Idiopathic" Pleural Effusions	33		
Options in the Local Treatment of Pleural Effusions Including Thoracoscopic Talc Pleurodesis	35		
The Place of Medical Thoracoscopy/Pleuroscopy in the Management of Pneumothorax	41		
Primary Spontaneous Pneumothorax	42		
Secondary Spontaneous Pneumothorax	44		
Catamenial Pneumothorax	45		
The Place of Medical Thoracoscopy/Pleuroscopy in the Diagnosis of Diffuse Lung Diseases	46		
Medical Thoracoscopy/Pleuroscopy in Other Indications	48		
Medical Thoracoscopic Sympathectomy	48		
Splenectomy	50		
Pericardial Fenestration	50		
Solitary Lung Lesions	51		
Diseases in the Region of the Chest Wall, Diaphragm, and Thoracic Spine	51		
Mediastinal Tumors	51		
Postoperative Cavities	51		
4 Medical Thoracoscopy/Pleuroscopy in Children	53		
5 Medical Thoracoscopy/Pleuroscopy in Animals	54		
Use for Diagnosis and Treatment in Animals	54		
Use for Research in Animals	54		
Use for Teaching of the Technique	54		

6 Medical Thoracoscopy/Pleuroscopy in Research	56	11 Techniques of Medical Thoracoscopy/Pleuroscopy	69
Future Areas of Research	56	Endoscopy Room	69
7 Clinical Prerequisites for Medical Thoracoscopy/Pleuroscopy	57	Sterile Conditions	70
8 Contraindications	58	Patient Monitoring during the Procedure	71
9 Complications and Their Prevention	60	Personnel	71
Prethoracoscopic/Prepleuroscopic Complications	60	Equipment	71
Air Embolism	60	Rigid Thoracoscopes	72
Hypersensitivity Reaction to Local Anesthetic	61	The Semirigid (Semiflexible) Pleuroscope	73
Complications during Medical Thoracoscopy/Pleuroscopy	61	Phases of Medical Thoracoscopy/Pleuroscopy	76
Pain	61	Patient Positioning	76
Hypoxemia	61	Selecting the Point of Entry	78
Hypoventilation	61	Point of Entry for Specific Localized Lesions	78
Cardiac Arrhythmias	61	Techniques for Introduction of the Endoscope	
Hypotension	61	in Pleural Effusion, Pneumothorax, and Other	
Hemorrhage	61	Conditions	78
Injury to Lung or Other Organs	61	Access to the Pleural Space	78
Postthoracoscopic/Postpleuroscopic Complications	62	Anesthesia for Medical Thoracoscopy/Pleuroscopy	84
Reexpansion Pulmonary Edema	62	Technique of Local Anesthesia	84
Pain	62	Additional Technical Suggestions	86
Postoperative Fever	62	Performance of Rigid Thoracoscopy	86
Wound Infection	62	Direct and Video-Controlled Inspection	88
Empyema	62	Biopsy Techniques	89
Subcutaneous Emphysema	62	Stapled Wedge Resection	91
Persisting Pneumothorax	62	Performance of Semirigid (Semiflexible)	
Prolonged Air Leakage	62	Pleuroscopy	92
Continuing Pleural Fluid Production/Pleurodesis Failure	63	Comparison of the Rigid and Semirigid	
Early Complications after Talc Pleurodesis	63	Techniques	92
Late Complications after Talc Pleurodesis	63	Evaluation of Specimens	93
Seeding of Chest Wall by Tumor Cells/Implantation of Tumor Cells	63	Technique of Thoracoscopic Talc Pleurodesis	93
Mortality	63	Chest Tube Care	95
Summary	64	Drainage Systems	95
10 Knowledge and Skills Required	65	Assessment of Chest Tube Function	96
Knowledge of Respiratory Diseases	65	Chest Tube Removal	98
Knowledge of Thoracic Anatomy	65	12 Documentation	99
Knowledge of the Pathophysiology of the Pleura	67	13 Teaching Methods	100
Skills	67	Suggestions for Learning the Technique	100

Section B: Atlas

14 Malignant Pleural Effusions due to Lung Cancer	103	18 Tuberculous Pleural Effusions	124
15 Pleural Effusions due to Diffuse Malignant Mesothelioma and Asbestos-related Pleural Diseases	108	19 Pleural Effusions of Other Origin	130
16 Malignant Pleural Effusions Secondary to Metastatic Neoplasms	115	20 Pneumothorax	137
17 Pleural Effusions due to Malignant Lymphoma / Myeloproliferative Neoplasm ...	122	21 Diffuse Lung Diseases	143
		22 Other Indications	150
		References	156
